INSTRUCTIONS							
You can add or remove anything you like from the generator's input. You can add new columns for new catagories of output, or remove that one philosophy you hate							
The output will only change on edit. just type something into any cell and click away and the generator will activate							
Just copy the randomizer formula over to the next column to the right if you want to add something. I especially recommend adding your own touch to the "detail" col							
After all, there are an infinite number of details a city could have!							
If you're a native of NOLA or NYC, don't contact me to tell me all about how wrong I got your city and how it's actually incredible. NOLA is one of my favorite cities or							
and I'm reducing it down enough to fit in a spreadsheet random generator. If you want it to be different in your copy of the sheet, change it.							
Most of the items are relative to the wider society of the world, and whether a city has universal and quality, universal and rudimentary, or universal and inequal educ							
If you generate a city that is perfect for what you need in every way, except it says "plains" when *you* wanted it to be "alpine"........							
just pretend it says alpine.							
If two parts of the output seem to contradict each other, you can either change them to something else, ignore it, or find a creative way that they *don't* contradict, a							
Example: Climate: arctic, landform: alpine, technology: warmaking, defendibility: LOW							
what a fascinating city it would make... I imagine an frozen mountainside warmongering citystate imports food. Perhaps they are terribly vulnerable to siege?							
If you make a cool city, copy it. If you change anything on the sheet it'll be gone forever.							
Credit for inspiration goes to Italo Calvino's Invisible Cities							
Feel free to use the output as inspiration for writing, worldbuilding, alternate histories, TTRPG campaigns, or anything else you can think up.							
Please reach out and tell me what you're working on if this generator is useful to you! I'd love to hear about it.							
Creator: Constantine at https://shenaniganery.neocities.org
